

About NEFHRC Newsletter . . .

This monthly newsletter is to help members keep updated on our club events, achievements, or other announcements that may be of interest. Please call or e-mail Karen VanDonsel at (828) 877-3254 or karenvandonsel@gmail.com if you have anything you would like to submit. Alternatively, you may contact Tom Gaddis at (904) 699-3084 or President@nefhrc.net.

Please feel free to submit pictures, announcements of events, brags, sale of dog or training equipment, litters, or any other announcements for club members! The deadline for submissions is the 15th of each month.

If you have an idea for a recurring feature article, please let us know. This newsletter is for you, our members. We want to include what you want. So, please help make this a

great newsletter. Submit your articles, pictures, stories and ideas. We want to hear from you!

Brian McMillan and Rev—2015 New Member of the Year and 2015 Dog of the Year

Newsletter Correction

In last month's issue of The Hunter's Blind we included an article regarding the May Training Day, Annual Meeting, and Annual Picnic/Awards. The article that appeared was in error. Unfortunately, there was a mix-up in the files and the article that appeared was from May 2015.

We have included the corrected article, in full, in this issue on page 5. We apologize for the error and any inconvenience it may have caused.

Inside this issue:

NEFHRC 2016 Fall Hunt Test	2
Rupture of the Anterior Cruciate Ligament	2
2016 Annual Picnic (Corrected)	5
August-September Calendar	6

Coming Events:

- ◇ 08/20/2016 NEFHRC Training Day
- ◇ 09/10-09/11/2016 NEFHRC Hunt Test
- ◇ 09/10-09/11/2016 Big Elkin Creek Hunt Test
- ◇ 09/10-09/11/2016 North Georgia Hunt Test
- ◇ 09/19-09/23/2016 Fall International Grand

NEFHRC 2016 Fall Hunt Test

The NEFHRC Fall 2016 Hunt Test has been rescheduled to September 10-11, 2016. The test will be held at SSJ Farms Quail Hunting Preserve located at 28163 Dog Gone Trail, Hilliard, FL 32046. The Hunt Test Premium has been published and is available for download at <http://nefhrc.net/premiums/nefhrc-fall-2016-v1.pdf>.

Entry for the Hunt Test will be by Entry Express (<http://entryexpress.net>).

The Hunt Chairman is NEFHRC VP Brian Milner. Brian can be contacted by phone at (850) 687-7094 or by e-mail at ze6464@yahoo.com.

The Hunt Secretary is Andy Brittingham. Andy can be reached by phone at (904) 284-3961 or by e-mail at abrittingham@gmail.com. Andy requests that members not telephone before 5 PM.

Lunches will be available for purchase at the Hunt Test. Callahan BBQ will be doing the Saturday night Tail Gate Party.

Volunteers are needed for a variety of tasks during the Hunt Test. We would encourage everyone to volunteer, even if it's just a small task. Please contact Carolyn Abood by e-mail at cbrutusmom@aol.com or by phone at (904) 505-3404 to see how you can help make this the best Hunt Test possible.

Ruptured Anterior Cruciate Ligament (ACL)

The knee is prone to a number of injuries as any football player will tell you. One of the most common knee injuries in dogs is a ruptured cruciate ligament.

Knee anatomy

The knee is a joint that is formed by three bones: Femur (the long bone extending down from the hip); Tibia (the bone between the knee and ankle); and Patella (the kneecap). These bones are joined together by a number of ligaments, which are tough fibrous bands of tissue. Two ligaments crisscross in the joint from the femur to the tibia and are called cruciate ligaments (cruciate means cross). The one towards the front of the leg is called the anterior cruciate ligament and the one crossing behind it is the posterior cruciate ligament. These ligaments prevent the ends of the femur and tibia from moving back and forth across each other.

A rupture of the anterior cruciate ligament (ACL)

When the anterior cruciate ligament ruptures (is torn), the joint becomes unstable and the femur and tibia can move back and forth across each other. The anterior cruciate ligament is commonly torn when the dog twists on his hind leg. The twisting motion puts too much tension on the ligament and it tears. This often occurs if the dog slips on a slippery surface, makes a sudden turn while running, or is hit by a car. Obesity puts too much weight on the knee and overweight dogs tend to have more occurrences of ruptured cruciate ligaments. It appears that in most dogs with the problem, the ACL slowly degenerates and becomes weaker until it ruptures, without any sudden injury. Certain breeds appear to be at increased risk of ACL degeneration and include the Newfoundland, Labrador Retriever, Rottweiler, Bichon Frise, St. Bernard, and others. Many dogs with a de-

Continued From Page 2

generating ACL will have the condition in both knees. In small breed dogs, a [luxating patella](#) may predispose them to a ruptured anterior cruciate ligament.

Symptoms of a ruptured cruciate ligament

Dogs who have ruptured their cruciate ligament will appear suddenly lame, and usually hold the foot of the affected leg off the ground. The knee may become swollen. In time, the dog may start to use the leg again, but often lameness returns. Dogs with a degenerating ACL may also show some pain, and there may be some swelling in the joint.

Diagnosis of a ruptured cruciate ligament

The diagnosis of a ruptured cruciate ligament is made through observing abnormal movement of the joint. A veterinarian will place one hand around the femur and one around the tibia in a precise manner. By applying pressure on the knee, the veterinarian will feel the bones move abnormally in what is called a 'drawer sign.' It is called that because the movement of the femur in relation to the tibia is similar to pulling and pushing in the drawer of a cabinet. If an animal is in a lot of pain, or very nervous, the muscles near the knee may be so tense that they prevent the drawer movement from occurring. If a veterinarian suspects a ruptured cruciate ligament in a dog but cannot elicit the drawer sign, the dog may be heavily sedated to relax the muscles and then re-examined for the drawer sign. Many dogs with a ruptured cruciate ligament will have swelling on the inside aspect of the knee, and this is called a medial buttress. Radiographs are commonly performed to better assess the amount of arthritis that may be present.

Treatment of a ruptured cruciate ligament

If the ligament is completely torn, the dog (especially a large dog) is generally treated with surgery. There are several different methods used to repair the knee joint when an anterior ligament is torn. Some entail using synthetic suture material, or a portion of adjacent fibrous tissue to basically re-create the ligament. The suture or tissue is made to extend from the outside lower portion of the femur to the inside upper portion of the tibia. After the surgery, the dog must be strictly confined for 2 weeks. By day 10 after surgery, most dogs touch the toe of the affected leg to the ground and will start bearing minimal weight on the leg. Once the dog has reached this point, it is often very difficult to keep the dog quiet until complete healing has taken place. The dog generally has to be restricted to only leash walking for a minimum of 4-6 more weeks; the exact amount of time depends upon the extent of the injury and the corrective procedure performed. This is extremely important to prevent the surgical correction from tearing. The veterinarian's instructions regarding exercise during the recovery period should be followed very carefully.

Continued on Page 4

Another surgery that may be performed is the tibial plateau leveling osteotomy (TPLO). In this procedure, a portion of the tibia is cut, moved, and reattached to a different portion of the tibia using plates and screws. By changing the conformation of the tibia, the joint is stabilized. This is a technically difficult surgery but it has shown to produce excellent results, often with less arthritis. This surgery is especially recommended for dogs over 50 pounds in weight. The recovery period is similar to that with the other surgical procedures.

The third procedure that may be used is the tibial tuberosity advancement (TTA). This is another surgery in which a different portion of the tibia is cut, and allowed to heal at a different angle to change the mechanical stresses on the joint. As with the TPLO, this surgery is more complex and it requires special equipment and training.

In some instances, if the cruciate ligament is only partially torn, the animal is older, has medical conditions which could affect healing, or the owners will not be able to keep the dog quiet for a number of weeks after surgery, medical treatment is used. This basically consists of controlling the dog's activity for 8-12 weeks. Swimming and low-impact exercise (walking) may be done on a controlled basis, as instructed by a veterinarian, to keep up muscle strength. If overweight, the dog should be placed on a reduced-calorie diet. Nonsteroidal anti-inflammatory drugs (NSAIDs) such as carprofen, etodolac, meloxicam, deracoxib, buffered aspirin, or other medications are often used to reduce inflammation in the joint and relieve pain. (Do NOT give your cat aspirin unless prescribed by your veterinarian.) Products containing glucosamine, chondroitin, perna mussel, polysulfated glycosaminoglycans, and other chondroprotective agents are often recommended, as well.

If a dog with a ruptured cruciate is not treated, severe degenerative joint disease (arthritis) usually occurs. In addition, because the dog favors the affected leg, he will generally put more weight on the unaffected leg. It is not unusual for the dog to rupture the anterior cruciate ligament on that leg as well because of the increased stress on the leg.

Prognosis

If the dog's exercise is restricted as instructed, and overweight dogs return to normal body weight, the prognosis is good. Depending on the amount of injury to the knee and length of time between the injury and correction of the problem, degenerative joint disease may occur as the pet ages.

2016 Annual Picnic *(corrected)*

by Carolyn Abood

NEFHRC held our monthly training day, annual meeting, annual awards, and annual picnic on May 21, 2016, at the Moore's on the Northside. We had 26 people in attendance. We had perfect weather, delicious food, award presentations, and dock dog fun with our dogs. Matt McKenzie conducted a puppy class for handlers.

New President Tom Gaddis introduced Vice President Brian Milner and Treasurer Barry Sales. NEFHRC Secretary Terri Tennell was unable to attend.

Tom also introduced new members: the Hazouri family and Axl; Ann Smith and her grandson, Joshua Harrington, and his dog Tess who came from Douglas, Ga. Joshua has trained Tess from a puppy and is aiming for his Finished title.

Special guests Stephen Rosasco & Claudia said farewell as they were headed to Idaho for the summer. We'll miss them.

For the annual picnic, Super chef, Joe Abood cooked burgers, sausage dogs, and hot dogs, while members brought side dishes. We had yummy homemade salads, vegetables, mac and cheese, dips and desserts.

During the annual awards, Don Imfeld, one of our "founding fathers", presented club plaques to the following:

- ◇ Dog of the Year - Brian Milner's Rev
- ◇ Puppy of Year - Adam Triay's Natty
- ◇ New Member of the Year - Brian Milner
- ◇ Volunteer of Year - Tom Gaddis.

Our volunteer of the year plaque is in remembrance of Brian McMillan, a beloved member who helped establish NEFHRC. Names of honorees are placed on a perpetual plaque.

Tom also surprised Don Imfeld by making him a Lifetime Member. Don has been a faithful member and volunteer since the beginning of the club and continues to help with training days and our Hunt Tests.

During the annual meeting, Tom stated we are committed to revitalizing the club, involving members in planning and staffing activities, and leadership.

It was a great day for members and their dogs!
